Azolver parcel lockers

Smart parcel lockers enable an extremely flexible and touch free delivery of parcels, equipment or other objects.

The lockers are created by modules so, you can let your imagination flow when you build your unique solution.

High service

- Pick up when appropriate

Security

- Highest traceability
- Touch free delivery
- Only the right recipient can pick up the package

Save time

- No need for service employees to support deliveries

When an item is placed in the locker, the system automatically sends a notification to the receiver.

The recipient can then pick up the parcel when it is appropriate with a unique pin or QR code.
